Stex 45 threaded plate GP

Stex 45 threaded plate GP

Product description

Optionally with connection M8, M10 or M12.

Your advantages:

- Instead of a toothed plate and a lock plate, use only the one-piece Stex 45 GP threaded plate.
- Insert threaded plate GP into profile rail, turn by 90°, screw in threaded pin, attach counter nut and mount pipe clamp.
- Form-locking connection in profile rail due to toothed plate.
- After turning, the Stex threaded plate automatically locks into the profile rail teeth. This is noticeable by a distinct clicking sound when sliding along the rail.
- Threaded pins or threaded rods can be screwed in effortlessly.

Specification

Application area:	Quick fixing system for direct attachment of pipe clamps or threaded connections.
Type of attachment :	form-locking connection
Profile type:	45

Technical data

Material:	Steel
Surface:	galvanized

Remark: For load specifications see end of chapter 2c.
